

## 2x2 Style Guide

- Tab indentation (or 4 spaces per tab)
- camelCase variableNames
  - Variable names begin with a lower case.
  - Multiword variable names follow the camelCase format.
  - **Exception:** Certain Javascript/React/React-Parity variables require first letter to be capitalized.
- ALL\_CAPS GLOBALS
  - Example: MY\_GLOBAL\_VARIABLE
  - Global variables names are all capital letters.
  - Multiword names are separated by an underscore ( \_ ).
- Macros
  - Example: MY\_MACRO
  - Macro names are all capital letters.
  - Multiword names are separated by an underscore ( \_ ).
- Comments:
  - Comments will follow the following format:  
/\* <type> exactName //possibly () if function.  
\* Purpose: purpose of function/variable/class/etc.  
\* Parameters: parameter, types, in, order.  
\* Return: what it returns (description if necessary).  
\*/
- Unix Linefeed
  - New lines of text are denoted by the LineFeed character
