

Sprint 1 Report
Ethereum Microtransactions
2x2
10/21/2017

Actions to stop doing:

We should stop looking into implementing our code into the raspberry pi because we need to focus on learning the general core concepts about the project.

Actions to start doing:

We should start programming in solidity to start basic transactions.

Actions to keep doing:

We should keep learning and understanding ethereum and the selected framework we decide on. Then make sure it is able to connect with the localhost and potentially other computers given the time (within the development setting).

Work completed/not completed:

As of right now, we are in progress with everything but nothing is entirely completed as of the time (10/22/17 11:00am).

Work completion rate:

Our work completion rate is about 90% of sprint 1.
